Area 1 -

Closed around 2017 due to invasive species. Road is mostly below grade native silt loam soil surface and is typically wet most of the year. These roads are not capable of supporting anything more than intermittent traffic. These road run through extensive wetlands and many of the harvests in this area are restricted to frozen ground. If these road were reopened to traffic impacts likely are spread of invasive species primarily garlic mustard and likely sever road damage. The maximum non-motorized access distance for county lands accessed from these road is less than 2,000 ft.
